

Modified / More STEM Articles

Summary: My Science / Technology / Engineering / Math (STEM) articles examine material for the layman student choosing a STEM field of study. These articles follow a math-oriented Energized Algebra format.

Revised Material: Help modify my articles to better support STEM educators & inform their students of STEM careers. If an active educator sees material herein that should be corrected, modified, or included to improve the article toward its purpose, please contact me. I will consider all suggestions. If the changes are significant, the educator can be a coauthor controlling the copyright & ownership of the modified article.

Extra Material: Introduce prospective students to jobs of practicing STEM professionals currently in the field. These professionals can generate articles like mine explaining their occupations. If I can understand their layman version, I can post it @ my website. Please contact me.
